			/
1	VAE-Based Interpretable Latent Variable Model for Process Monitoring		IEEE Transactions on Neural Networks and Learning Systems
2	Optical tunable multifunctional applications based on graphene metasurface in terahertz		Physica Scripta

3	Digital twin enhanced federated reinforcement learning with lightweight knowledge distillation in mobile networks		IEEE Journal on Selected Areas in Communications
4	Intelligent containment control with double constraints for cloud-based collaborative manufacturing		IEEE Transactions on Industrial Informatics
5	Decentralized P2P federated learning for privacy-preserving and resilient mobile robotic systems		IEEE Wireless Communications
6	Correlation-split and Recombination-sort Interaction Networks for air quality forecasting		Applied Soft Computing
7	Multi-scale discriminant representation for generic palmprint recognition		Neural Computing & Applications
8	Tunable plasma-induced transparency of a novel graphene-based metamaterial		Results in Physics
9	Cooperative offensive decision-making for soccer robots based on bi-channel Q-value evaluation MADDPG		Engineering Applications of Artificial Intelligence
10	Unified Spatial-Temporal Neighbor Attention Network for Dynamic Traffic Prediction		IEEE Transactions on Vehicular Technology
